

Statement on Oil and Oil Additives

1. HIT-FLON® CONCENTRATE is contained as a preservative and coating active-agent in the products.
2. HIT-FLON® does not alter oils because it **completely** sticks on the piston and cylinder surface etc. After treatment, no solid mater particles remain in the oil.
3. Therefore the oil industry does not have any more objections to HIT-FLON®.
4. All oil additives, which allegedly influence somehow the surface, have no proven effect and are therefore useless. Only HIT-FLON® can build up a coating, but it is no oil additive, although added to the oil.
5. Since it does not influence any oil, HIT-FLON® **does not need any release** by car manufacturers.
6. Engine wear is caused by oil and poor additives. They cause damages of billions of EURO's world-wide. It is proven that HIT-FLON® can avoid 54% of those damages.
7. The inventor, Dipl. Eng. Malte HUTH grants WARRANTY of saving up to **25%** of the additional fuel consumption (= difference between manufacturer's data and effective consumption).
